Fractions in our everyday lives

Be on the look out for evidence of fractions in our everyday lives and record them, including **fractions, decimals and percentages (%).**
For example, you may see **decimals** on packaging with quantities (g/kg or ml/l) or you may see special offers on adverts in shops or on T.V., which could include **percentages.** You may even find that your family has to use fractions when sharing or measuring.
Please make a note of how the fraction is being used and I'm sure you will be surprised how often fractions are used in our everyday lives. We will share your findings, linking in with our recent numeracy work. You may like to use the chart below, or you can present your findings in another way.

Record where the fraction was used	Record fraction, decimal or percentage
